

## ENERGY EFFICIENCY POLICY

our environment and build a sustainable future. To this end, we adopt the following principles:

### **COMPLIANCE WITH LEGAL AND ENVIRONMENTAL STANDARDS:**

We are committed to full compliance with national and international energy efficiency standards, legal requirements and environmental regulations. We follow these standards with the aim of reducing energy use and continuously improving our consumption performance.

### **EDUCATION AND AWARENESS:**

We implement regular training programs to raise awareness of all our employees on energy efficiency and encourage their participation. We also provide support to our employees in achieving our energy efficiency targets.

### **COOPERATION AND STAKEHOLDERS:**

We value collaborating with all our stakeholders, namely our guests, employees, visitors and business partners, on energy management issues. By creating common goals and results, we conduct an active communication and interaction process to increase social awareness and consciousness on energy efficiency.

### **NEW TECHNOLOGY AND PRODUCTS:**

We continually search for energy efficient product, equipment, fittings and technology alternatives. By purchasing and using these alternatives, we aim to achieve our energy efficiency goals.

### **ENERGY MANAGEMENT SYSTEM:**

We document our energy management system, distribute it to all our departments, update it when necessary and aim to improve it continuously. This system supports the effective implementation of our energy efficiency strategies.

### **EMERGENCY PLANNING:**

We assess energy risks and emergencies such as potential energy shortages and develop measures to cope with such situations. This way, we are prepared to maintain business continuity and energy efficiency.

**This policy reflects our commitments to energy efficiency and sustainability. We are committed to implementing these principles together with all our employees, business partners and stakeholders and to contributing to a sustainable future.**
